

# BLADE SHARPENING SERVICES

Blades and knives are essential components in many manufacturing and processing operations. To work at top efficiency these blades need to be kept as sharp as possible. However, even the highest quality blades dull after use. Dull blades can slow down production and result in an inferior product. When the condition of your blades begins to have a negative impact on production, you have two options: replace them or have them re-sharpened.

SLITTER BLADES

SHEAR BLADES

AND OTHERS!

Cliff Industrial sharpens all types of blades and knives including:

- > Shear/Guillotine Blade
- > Granulators
- > Slitter Blades
- > Chipper Blades
- > Pelletizers
- > Saw Blades
- > Circular Knives
- > Anvil Rebuilding

## We Make Dull Blades Sharp Again!

Cliff Industrial can take your dull blades and re-sharpen them to prime condition – **at a lower cost than purchasing replacement blades**. If your blades aren't making the cut, Cliff Industrial has the solution. We've been providing dependable industrial blade sharpening services to Eau Claire, WI and surrounding communities for many years, and have earned a well-deserved reputation for delivering high quality work on schedule.

Cliff Industrial sharpens all types of blades and knives including:

- > Shear/Guillotine Blades - up to 100"
- > Slitter Blades
- > Granulators
- > Saw Blades
- > Circular Knives
- > Pelletizers
- > Wood Chipper Blades
- > Anvil Rebuilding

We can also resurface or regrind the sleeves, rolls and shafts used in shear and score cutting processes.

What we can't do are lawn mower blades, perforator wheels or kerf blade sharpening.

## Our Service is a Cut above the Rest!

Don't let a dull blade cut into your bottom line. For blade sharpening services that are a cut above the rest, contact Cliff Industrial at 715-835-8314.

Blade Sharpening

MACHINE BUILD AND REPAIR

# BLADE SHARPENING SERVICES

Our sharpening process guarantees that our customers get the highest quality work:

- Upon arrival at our facility, your blades will be carefully inspected for wear and defects. If the damage is too severe we'll let you know.
- The blades are ground and honed to an ultra-finished edge by our experienced craftsmen, giving them a wear resistant edge.
- When the work is complete we give each blade a final inspection. Certification and inspection documentation are available upon request.
- Our process allows us to meet almost any deadline. We provide a five day turn around guarantee with next day services available.
- Your blades will be securely packed to insure they arrive in the same condition as they left our facility.

We'll work with you to develop a regularly scheduled inspection and maintenance program to insure your blades are always their sharpest. More information available at [www.cliffindustrial.com](http://www.cliffindustrial.com).

## Slitter Blades

Slitter blades, also known as crush cut blades, are used to cut long rolls of material into shorter ones or wide rolls into narrower ones. Cliff Industrial provides expert sharpening services for all types of slitter blades including circular, top and bottom slitters.

## Pelletizer Blades

Pelletizer blades are used in the plastics and rubber industries. Cutting these heavy materials can cause you blades to dull quickly over time. Cliff Industrial sharpens all pelletizer blades including, strand and underwater pelletizer blades and knives.

## Shear/Guillotine Blades

Shear and guillotine blades are used to cut many materials, including textiles, plastic, paper and metal. We have experience in sharpening all types of shear blades, both straight and circular.

## Granulator Blades

Granulator blades are used to cut plasticizers and other materials, breaking them down into a grain form. Chopping up these materials takes a heavy toll on the blades, causing them to lose their edge after a certain amount of use.

## Chipper Blades

Chipper blades make it easy to cut up trees and other kind of brush for disposal or recycling. Chopping up these materials takes a heavy toll on the wood chipper's blades, causing them to lose their edge after a certain amount of use.

## Anvil Rebuilding

Cliff Industrial also specializes in anvil rebuilds, resurface or regrind the sleeves, rolls and shafts used in shear and score cutting processes.

**We don't sharpen lawn mower blades, perforator wheels or kerf blades.**

We provide our customers with quick turnaround service – five day guarantee with next day options available! Local pickup and delivery options are available as well. Call us at 715-835-8314 for more information.
